*Şirket Profilimiz*

## Kurumsal

Daha öncesinde içinde bulunduğumuz aydınlatma sektöründe birçok başarılı projeye imza attık. 2015 yılı itibari ile alüminyum direk imalatına başlayıp kendi tasarımlarımız olan aydınlatma direkleri ile piyasaya farklı bir bakış açısı getirmiş bulunmaktayız.

Enerji tasarrufu ve yenilenebilir maddelere ihtiyacımızın arttığı günümüzde, alüminyumun uzun ömürlü ve geri dönüştürebilir olması; led ışık kaynağının ise diğer ışık kaynaklarına oranla çok daha fazla tasarruf sağlaması aydınlatma direklerinde bu iki materyali birleştirmemizin en önemli sebebi oldu.

## Vizyonumuz

Uluslararası vizyon, misyon ve değerleri doğrultusunda çalışmak, müşteri isteklerinin daima ön planda tutulması, çevreye, doğaya ve topluma saygı, İnsan kaynaklarına değer veren, üretkenliği destekleyen ve gelişmesine yardımcı olan açık iletişime dayalı çağdaş yönetim anlayışı, tüm kaynakların verimli kullanımı, müşterilerimiz, ortaklarımız, tedarikçilerimiz ve çalışanlarımızla bütünlük duygusu, ticari ve sosyal ilişkilerimizde karşılıklı güven, üstün iş ahlakı ve dürüst davranış ilkesinden vazgeçmemek olacaktır.

## Kalite Politikamız

İç ve dış müşterilerin memnuniyetini sürekli artırarak tercih edilebilirliğimizi sürdürülebilir kılmak. Müşteri için gereken ürün ve hizmet kalitesini minimum maliyet ile sağlamak için süreçlerin sürekli gözden geçirerek iyileştirilmesini sağlamak. Çevreye dost, geri dönüşebilir bir malzeme olan alüminyumun kullanımını sağlamak.

Özel olarak tasarlanmış geniş ürün yelpazesini müşterilerimize sunmak. Korozyona ve dış hava şartlarına karşı sağlam üretim. Uzun kullanım ömrü ve farklı renklerde görselleği artırmak. Yüksek yansıtma kabiliyeti ile estetik ve şık görünüm.

## Misyonumuz

Gerçekleştirmek istenen projenin kaynaklarımıza göre değerlendirilip etkin ve verimli kullanımıyla, en az maliyette rekabet edebilir kalitede üretim ve hizmet sağlayarak müşterilerimizin ve diğer tüm paydaşlarımızın memnuniyetini kalite politikamızdan ödün vermeden sağlamak.

*Company Profile*

## Corporate

We have been carried out a lot of successful projects and become one of the most respected firms in lighting market. In 2015 we have started aluminum pole production and brought a different perspective to the market with our own designs and lighting poles.

Today, necessity of energy saving and renewable materials is increasing, aluminum is long lasting and recyclable, the most important reason why we combine these two materials in the light poles is that the led light source can save much more energy than other light sources.

## Our Vision

We work in the direction of international vision, goal and values, to keep our customers' requests always on top, to respect for the environment, nature and collective respect, to respect human resources, to support productivity and to help develop our modern communication management approach, efficient use of all resources. We will not give up our principles of mutual trust, superior business ethics and honest behavior in our commercial and social relations with our suppliers and employees.

## Quality Policy

To increase the satisfaction of the domestic and international customers and to make our preference sustainable. To ensure that the processes are constantly improved by ensuring the quality of the products and services demanded by the customer with minimum cost. Provide the use of aluminium, which is recyclable and nature friendly.

To offer our customers a wide range of specially designed products. Robust production against corrosion and weather conditions. Long lifetime and increase visuals in different colors. Aesthetic and stylish appearance with high reflection ability.

## Our Goal

To ensure the satisfaction of our customers and all other stakeholders without compromising our quality policy by providing efficient and efficient use of the project according to our sources and providing production and service at competitive prices with the least cost.

## Malzemelere Ait Teknik Özellikler

- Uluslararası EN 60958 standartlarına göre veya benzeri Avrupa standartlarında üretilmiş ve test edilmiş malzeme kullanılır.
- TANIMLAR:
- Ekstrüzyon: Malzemelere sıcak ve soğuk halde basınç altında sürekli (sürekli) plastik şekil verme prosesidir.
- Alüminyum Profil: Ekstrüzyon prosesiyle elde edilen alüminyum alaşımlı mamüldür.
- Ekstrüzyon Oranı: Kalıba giren hammadde alanının çıkan toplam ürün alanına oranıdır.
- Eloksal: Alüminyum profillerin yüzeyini elektroliz yöntemi ile anodik oksidasyona tabi tutarak korozyona ve dış etkilere karşı dayanıklı hale getirmek ve dekoratif bir görünüm kazandırmak için yapılan yüzey işlemi.
- Boya uygulamaları için doğru boya bileşenleri ve tinerlerinin kullanılmasına dikkat edilir. Boya uygulayıcı personelimiz tecrübeli ve teknik spesifikasyon bilgilerine sahiptir.

## Kullanılan Alüminyumun Kimyasal Bileşimi

İmalatta kullanılacak alüminyum hammadde alaşımı EN-AW 6060 olup, alaşımlama elemanları aşağıda belirtilen limitler içindedir.

ELEMENT	Si	Fe	Cu	Mn	Mg	Cr	Zn	Ti	Diğer Her Biri	Diğer Toplam	Al
MIN	0,41	0,17			0,44						
MAX	0,46	0,22	0,02	0,05	0,48	0,02	0,02	0,02	0,05	0,15	Kalan

## Alüminyum Profillerin Üretimi ( Ekstrüzyon Prosesi ) ve Özellikleri Profillerin Ölçü Toleransları ve Yüzey Özellikleri

- Kullanılan profilin ölçü ve toleransları, EN 755-9'a uygun değerlerdedir.
- Profillerin görünür yüzeylerinde kalıp çizgisi, yırtık pick-up, çapak olmaz ve görünür yüzeyler eloksal kalitesindedir.

## Profillerin Mekanik Özellikleri

- EN AW - 6060 alaşımlı söz konusu profiller, T66 temper özelliklerini sağlayacak şekilde suni yaşlandırma ısıl işlemine tabi tutulur ve profillerin mekanik özellikleri TS-EN 755-2'ye uygundur.
- TS EN 7552 Standartına göre bu profillerin;  
Akma Mukavemeti: ( Rp0,2 ) min. 160 Mpa, Çekme Mukavemeti: ( Rm ) min. 215 Mpa % uzaması: ( A50mm ) ise %6, değerlerindedir.

## Profillerin Kaynak İşlemi

- Profillerin kaynak işlemi DIN EN 287-2 standartlarına uygun yapılır.
- Kaynak ve benzeri işlemler için personele özellikleri (personel uygulanacak olan test prosedürü, kaynak projesi ve kaynak şekilleri yapılan kaynak testi parçasının değerlendirilmesi) standardına uygun olarak, TÜV Cert tarafından sınanmış ve sertifikalandırılmış kaynakçılar tarafından yapılmaktadır.

## Profillerin Bükme İşlemi

Kullanılacak profillerin büküm işlemi " dijital radius ölçü kontrollü CNC büküm makinesi " ile yapılmaktadır.

## Profillerin Eloksal İşlemi

- Eloksal yüzey işlemini gerçekleştirecek tesisin TS 4992 " Metalik Malzemelerin Yüzey İşlemi - Alüminyum ve biçimlendirilebilir Alüminyum Alaşımlarının Anodik Oksidasyonu (eloksal) Teknik Özellikler " Türk standartlarına uygunluk belgesine ve sertifikasına uygundur.
- Eloksal işlemi büküm ve mekanik işlemlerden sonra uygulanmaktadır.

## Eloksal Yüzey Kaplama Özellikleri

- Eloksal yüzey kaplama kalınlığı min. 10 mikron olarak gerçekleşir. Ölçüm işleminde kullanılan " isoscope (eloksal kaplama kalınlığı ölçüm cihazı) DIN EN ISO 2360: Manyetik Olmayan Metaller Üzerindeki Yalıtkan kaplamalar - kaplama kalınlığı ölçümü - Girdap akımı metodu" standartına uygundur.

## Dayanım ve Işık İşlem Özellikleri ( EN AW 6063 ( AlMg0,7Si) için)

- Ekstrüzyonla İmal Edilmiş Boru

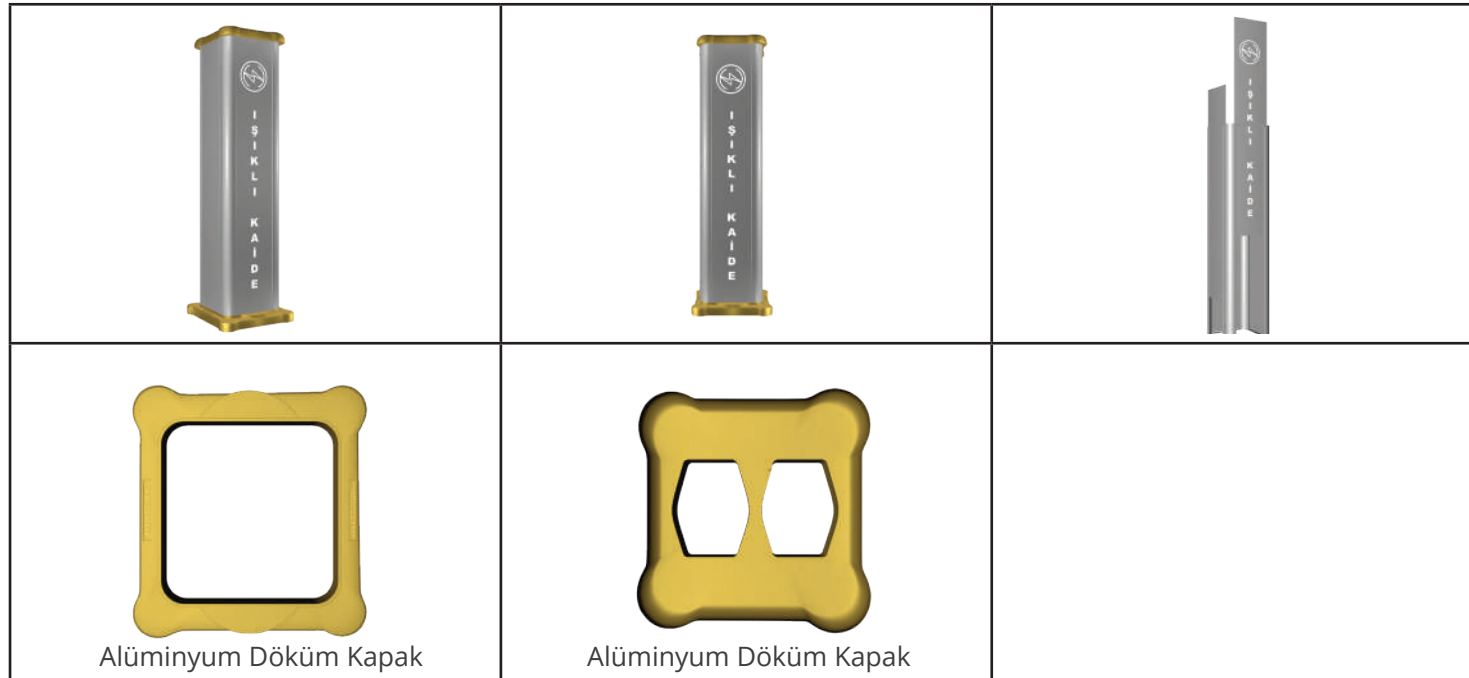

TEMPER	ET KALINLIĞI	RM (ÇEKME)	RP 0.2 (AKMA)	A % (UZAMA)	A(50) % UZAMA
T4	e<15 mm	120	60	16	14
T5	e<15 mm	260	120	8	6
T66	e<15 mm	215	160	8	6

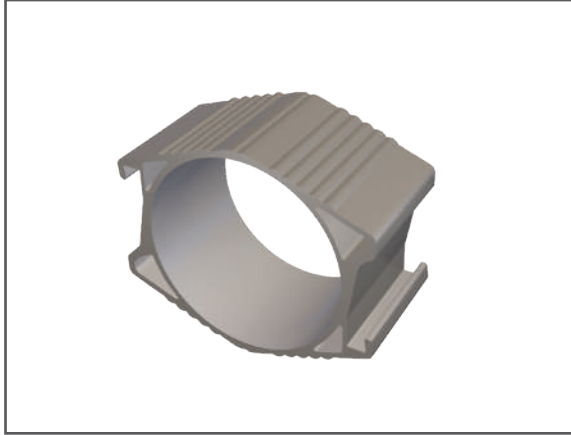

TEMPER	ET KALINLIĞI	RM (ÇEKME)	RP 0.2 (AKMA)	A % (UZAMA)	A(50) % UZAMA
T4	e<15 mm	120	60	16	14
T5	5mm<e<25mm	140	100	8	6
T66	3mm<e<15mm	195	150	8	6

T4 Temper: 520C'de 1 saat ısıtılıp solüsyona alınarak elde edilir.

T4 Temper ısıtım seviyesidir. Daha sonra 182C'de 3 saat bekletilerek T5 temper elde edilir.

T66 Temperin elde edilmesi için T4 temper elde edildikten sonra 177C'de 8 saat bekletilir. T5 ve sonrası temperler yapay yaşlandırma olarak bilinirler. Malzemenin sertlik ve dayanımı arttırmaya yönelik işlemlerdir.

## Material Specifications

- Materials that manufactured and tested according to international EN 60958 standards or similar European standards are used.
- DEFINITIONS:
- Extrusion : The material is in a continuous plastic forming process under pressure in hot and cold conditions.
- Aluminium Profile: It is an aluminium alloy product obtained by extrusion process.
- Extrusion Ratio: It is the ratio of the raw material area entering the casting to the leaving total product area.
- Eloxal: Surface treatment to make the surface of aluminium profiles resistant to corrosion and external influences by subjecting to anodic oxidation by electrolysis method and to give a decorative appearance.
- Our paint application staff pays extra attention to the use of correct paint components and thinners for paint applications and have experience and technical specific information.

## Chemical Composition of Used Aluminium

The aluminum raw material alloy to be used in manufacturing is EN-AW 6060 and the alloying elements are within the following limits.

ELEMENT	Si	Fe	Cu	Mn	Mg	Cr	Zn	Ti	Other All	Other Total	Al
MIN	0,41	0,17			0,44						
MAX	0,46	0,22	0,02	0,05	0,48	0,02	0,02	0,02	0,05	0,15	Kalan

## Production of Aluminum Profiles (Extrusion Process) and Properties Profiles Measurement Tolerances and Surface Properties

- The dimensions and tolerances of the profile used are in accordance with EN 755-9.
- On the visible surfaces of the profiles, there are no stripes, torn pick-ups, burrs, and visible surfaces are in eloxal quality.

## Mechanical Properties of Profiles

- The EN AW - 6060 alloys are subjected to artificial aging heat treatment to provide T66 temper properties and the mechanical properties of the profiles are in accordance with TS - EN 755-2.
  - According to TS EN 7552 Standard;
- Flow Strength: (Rp0,2) min. 160 MPa, Tensile Strength: (Rm) min. 215 MPa% elongation: (A50mm) is at 6%.

## Welding of Profiles

- Welding of the profiles is done in accordance with DIN EN 287-2 standards.
- Personnel spesification for welding and similar operations are made by welders who have been tested and certified by TÜV Cert in accordance with the standard (staff test procedure, welding project and welding form evaluation of welding test piece).

## Process of Bending the Profiles

The bending process of the profiles to be used is done with " CNC bending machine with digital radius measurement control ".

## Eloxal Processing of Profiles

- Plant that will provide eloxal Surface Treatment TS 4992 'Surface Treatment of Metallic Materials – Aluminum, Anodic Oxidation of Aluminum and Formable Aluminum Alloys' Technical Specifications " is suitable for the certificate and certificate of conformity to Turkish standards.
- Anodising is applied after bending and mechanical operations.

## Eloxal Surface Coating Properties

- Eloxal surface coating thickness min. 10 microns. The " isoscope (eloxal layer thickness meter) used in the measurement process is in accordance with DIN EN ISO 2360: Insulating coatings on non-magnetic metals - coating thickness measurement - eddy current method " standard.

## Strength and Light Processing Properties (for EN AW 6063 (AlMg0,7Si))

- Pipe that is produced by extrusion

TEMPER	WALL THICKNESS	RM (TENSILE)	RP 0.2 (YIELD)	A % (ELONGATION)	A(50) % ELONGATION
T4	e<15 mm	120	60	16	14
T5	e<15 mm	260	120	8	6
T66	e<15 mm	215	160	8	6

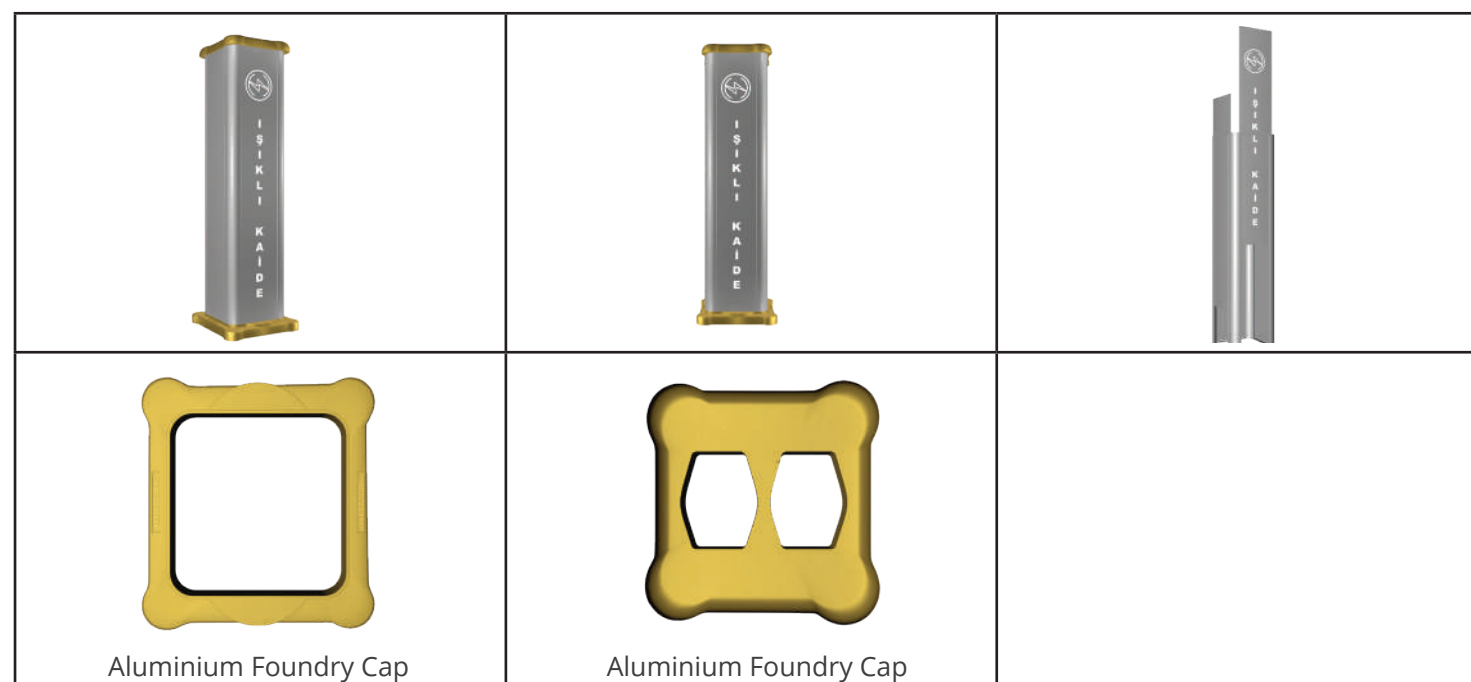

TEMPER	WALL THICKNESS	RM (TENSILE)	RP 0.2 (YIELD)	A % (ELONGATION)	A(50) % ELONGATION
T4	e<15 mm	120	60	16	14
T5	5mm<e<25mm	140	100	8	6
T66	3mm<e<15mm	195	150	8	6

T4 Temper: It is obtained by heating at 520 ° C for 1 hour and taking into solution.

T4 Temper is the heat treatment level. It is then held at 182 ° C for 3 hours to obtain T5 temper.

After obtaining T4 temper, it is kept at 177 ° C for 8 hours to obtain T66 temper. Tempers after T5 are known as artificial aging.

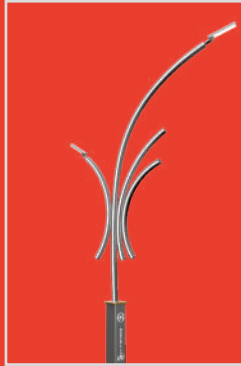

It is a process for increasing the hardness and strength of the material.
